# 1 Introduction

## 1.1 The website

PCMMASTERRACEDB is a website that lets you browse its catalogue of games to check their information, review them and check if you already own them or if they are in your wish-list. You can then talk about your favourite games with other users in the forums. While also managing your account using a personalised profile image.

There are then admins and the master of the site, who can both act as basic users.

Admins can and will moderate forums removing any harmful comment that any user should publish.

The master handles all game and subsequently, forum entries there are. Adding, modifying or removing them. The master can also manage users removing them.

# 2 Features

## 2.1 Users

- explore a database of games grouped by genre, or ordered by release date or rating;
- review the games you played and make your opinion count;
- share your opinions on the game forums and speak with other users;
- handle your user profile information and deletion;
- manage your personal library by labelling every game you either own or wish to own
- modify if you made a mistake your own comments or reviews or delete them

## 2.2 Admins

- enjoy all your features of the previous role;
- moderate forums by deleting harmful comments;
- make your status known with an admin label next to your profile name;

## 2.3 Superadmin

- enjoy all your features of the previous roles;
- use your control panel to see every user subscribed to the site and handle deletion;
- manage games and categories;

### 3 Mock-up

#### 3.1 Figma link

[Figma Link](#)

### 4 Accessibility

#### 4.1 Planning

Accessibility was a key part of design. All colors were chosen while keeping colorblind people in mind and checking that every color arrangement complies with color contrasts AAA standards.

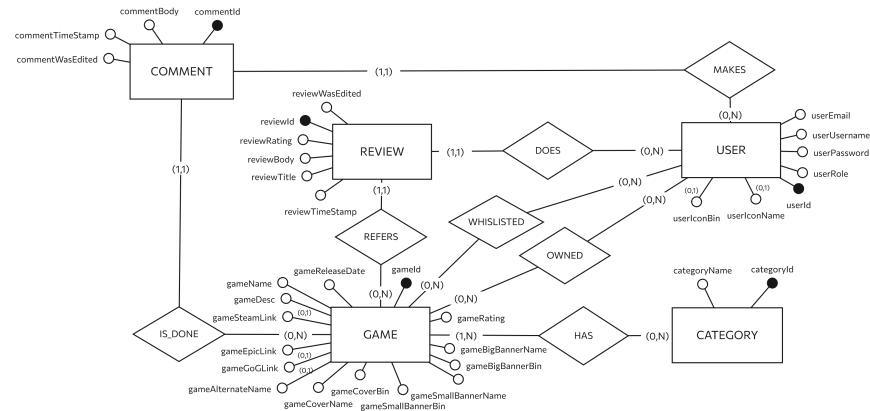

#### 4.2 Execution

The frontend was built following the correct heading designs in order to cater to people using assistive devices and wherever possible the site is also browsable using only the keyboard.

### 5 DB

#### 5.1 E/R Schema

The backend planning started with the database. Here, you can see the E/R schema:

## 5.2 Seeding

The seeding is completely handled in a typescript sub-project in the back-end. It consists of a main file called seed.ts that works using promise based seeding steps that first of all creates the database and then seeds it using a mix of already executable insert into SQL queries that are read and then executed. Or done with a JSON for users and games as they also require the insertion of images.

# 6 Technologies used

## 6.1 General

- Node.js
- Express.js
- Typescript
- NPM

## 6.2 Backend specific

- MySQL

## 6.3 Front-end specific

- Vue
- Vue Router
- Vite
- Axios
- Sass

# 7 NPM packages

## 7.1 Backend

### dependencies

- bcrypt
- connect-api-history-fallback
- cookie-parser
- dotenv

- express
- jsonwebtoken
- multer
- mysql2
- tsx

#### **dev-dependencies**

- @types/bcrypt
- @types/connect-history-api-fallback
- @types/cookie-parser
- @types/express
- @types/jsonwebtoken
- @types/multer
- @types/node
- typescript

## **7.2 Front-end**

#### **dependencies**

- axios
- moment
- pinia
- vue
- vue-router

#### **dev-dependencies**

- @vitejs/plugin-vue
- sass
- sass-embedded
- typescript
- vite
- vue-tsc

## 8 API endpoints

### 8.1 Authentication

#### Create

- `/api/auth/register` — Creates new user

#### Read

- `/api/auth/profile` — Gets user profile from current session, does not retrieve complete profile
- `/api/users/exists/username-exists/:username` — Checks if username exists
- `/api/users/exists/email-exists/:email` — Checks if email exists

#### Update

- `/api/auth/change-password` — Changes password of currently logged-in user after validating current password

#### Other

- `/api/auth/login`
- `/api/auth/logout`

### 8.2 User

#### Read

- `/api/users` — Lists all users (superadmin privilege required)
- `/api/user` — Gets profile of currently logged-in user from DB, including user image

#### Update

- `/api/user` — Changes image and nickname of currently logged-in user

#### Delete

- `/api/user/:userId` — Deletes a user (self-deletion or superadmin action)

### 8.3 Games

#### Create

- `/api/games` — Creates a game (superadmin only)

### **Read**

- `/api/games/rating` — Lists all games ordered by rating
- `/api/games/release` — Lists all games ordered by release date
- `/api/games/:genreId` — Lists all games of a given genre
- `/api/games/as-you-type/:partialName` — Lists games matching partial input
- `/api/games/matching/:partialName` — Lists all games matching search input
- `/api/game/:gameId` — Gets details of a single game
- `/api/game/all/:gameId` — Returns all details of a game

### **Update**

- `/api/games/:gameId` — Updates game information (superadmin only)

### **Delete**

- `/api/games/:gameId` — Deletes a game (superadmin only)

## **8.4 Categories**

### **Create**

- `/api/categories`

### **Read**

- `/api/categories`

### **Update**

- `/api/categories/:categoryId`

### **Delete**

- `/api/categories/:categoryId`

## **8.5 Game Categories**

### **Create**

- `/api/game-categories`

### **Read**

- `/api/game-categories/:gameId` — Reads all categories associated with a game

### **Update**

- `/api/game-categories`

### **Delete**

- `/api/game-categories/:gameId/:categoryId`

## **8.6 Owned**

### **Create**

- `/api/owned/:gameId`

### **Read**

- `/api/owned` — Lists all owned games of user
- `/api/owned/:gameId` — Checks if a game is owned by the logged-in user

### **Delete**

- `/api/owned/:gameId`

## **8.7 Wishlist**

### **Create**

- `/api/wishlist/:gameId`

### **Read**

- `/api/wishlist` — Lists all wishlist games of user

### **Update**

- `/api/wishlist/:gameId` — Checks if a game is wishlist by the logged-in user

### **Delete**

- `/api/wishlist/:gameId`

## 8.8 Reviews

### Create

- `/api/reviews/:gameId`

### Read

- `/api/reviews/game/:gameId` — Lists all reviews of a game, prioritizing user's review if logged in
- `/api/reviews/user` — Lists all reviews of the user
- `/api/reviews/permission/:gameId` — Checks if user already wrote a review

### Update

- `/api/reviews/:gameId` — Updates logged user's review

### Delete

- `/api/reviews/:gameId` — Deletes logged user's review

## 8.9 Forum

### Create

- `/api/games/:gameId/comments`

### Read

- `/api/forums` — Lists all forums
- `/api/forums/as-you-type/:partialName` — Lists forums matching partial input
- `/api/forums/matching/:partialName` — Lists forums matching search input
- `/api/games/:gameId/comments` — Lists all comments of a game
- `/api/games/:gameId/banner` — Gets forum banner

### Update

- `/api/comments/:commentId` — Updates comment

### Delete

- `/api/comments/:commentId` — Deletes comment

## 9 Project structure

### 9.1 Work-tree

```

```

## 10 Installation

### 10.1 Manual

To start following this guide, please open XAMPP Control Panel and start the MySQL server. Then in a directory of your choosing, clone the repository from section [11](#) using

```
git clone https://github.com/JacopoFoschi2/ElaboratoISW.git
```

- OPTIONAL: if you want to use a more secure secret please create a .env file inside backend folder.

Execute the command

```
node -e "console.log(require('crypto').randomBytes(64).toString('hex'))"
```

And copy the output. Then paste it in .env file following this structure

```
JWT_SECRET=PASTE_HERE
```

Following this step is strongly advised if the intention is to deploy the app in a prod setting. If you don't follow it the backend will work anyway without any issues but using an unsafe, hardcoded and public secret.

- open two terminal windows in the project root.
- on the first terminal change directory to backend with cd backend
- run the command npm run all and wait for it to end
- on the second terminal change directory to frontend with cd frontend
- run the command npm run all and wait for it to end
- open the shown http address (it should be https://localhost:4173)

## 11 Repository

### 11.1 Repo path
